Rotary Seals

OS-G10

Description

- Elastomer-coated OD, ribbed
- Spring-loaded sealing lip

Special features

- Modern sealing lip design for high dynamic sealing action
- Reliable static sealing inside housing
- For housings with high thermal expansion,
- e.g., light metal housing
- For split housings
- For housings with increased surface roughness
 For sealing thin-body and gaseous media
- No risk of fretting corrosion

Applications e.g.:

- Mechanical and apparatus engineering
- Agricultural machinery
- Construction machines
- Drive systems, industrial gearboxes, electric motors

Materials

Standard material

Elastomer NBR 70 black

Spring Spring steel according to DIN EN 10270-1 Metal case Carbon steel according to DIN EN 10139

Special materials

Elastomer FKM

Silicone ACM HNBR CR EPDM

Spring Stainless steel 1.4301 Metal case Stainless steel 1.4301

Application parameters

for the standard materials combination

Temperature -40°C to +100°C

Pressure depressurized, max. 0.05 MPa Shaft speed acc. to chart "Operating parameters

for rotary shaft seals"

Media Mineral oil based lubricants,

synthetic lubricants

When synthetic lubricants are used for which there is no empirical experience, test the compatibility in the laboratory or - better even - in practical trials. The operating temperature should not exceed 80°C.

Design information

Shaft

Tolerance ISO h11 Hardness min. 45 HRC Roughness $R_a = 0.2 - 0.8 \mu m$

 $R_Z = 1 - 5 \mu m$ $R_{max} \le 6.3 \mu m$

Surface finish free of orientation (lead free)

Housing bore

Tolerance ISO H8

Roughness $R_a = 1.6 - 6.3 \mu m$

 $R_Z = 10 - 20 \mu m$ $R_{max} \le 25 \mu m$

Installation

Please read our installation instructions.
